

Vertical Tanks

Features and Benefits

- Seamless construction
- UV stabiliser for longer outside lifespan
- FDA approved for use with food products
- Resistant to a wide range of chemicals
- Extremely tough
- Lightweight
- Odourless and inert
- Corrosion resistant
- Low tooling cost
- Short lead time
- Uniform wall thickness
- Low stress value Construction

Size	M/Hole	A	B	C
10 000 L	Z	3.0	2.17	2.6
5 500 LLP	Z	1.6	2.17	1.3
5 000 LHP	Z	2.4	1.7	2.2
2 500 L	X/Y/Z	1.8	1.5	1.55
1 500 L	X/Y/Z	1.5	1.2	1.3
1 000 L	X/Y/Z	1.4	1.1	1.2
500 L	X/Y/Z	1.1	0.8	0.8

Rainwater Harvesting

FACT

1mm rain = 1ℓ water per m² on roof Rainwater Harvesting is the collection, storage and distribution of rainwater from the roof, for the use inside and outside the home or business.

By using the rainwater harvesting system to supply some or indeed all of our requirements, we can drastically reduce our dependency on mains water as well as the associated costs there of.

Once you have installed the Rainwater Harvesting system, you are one step closer to drastically reducing your monthly water consumption.

Benefits of Rainwater Harvesting

- Significant economic, social and environmental benefits can be achieved
- There is no better quality water available naturally than rainwater
- Reduction of damage to streams, water habitats and organisms caused by storm water run off
- Ensures a backup when mains supply is not available

Home Composting

What is Compost?

Compost is a dark, crumbly and earthy smelling form of decomposing organic matter.

Why should I make compost?

Composting is the most practical and convenient way to handle your household and yard wastes. It is easier and cheaper than bagging your wastes and dumping them. Compost also improves your soil and the plants growing in it. If you have a garden, a lawn, trees, shrubs, or even planter boxes, you have a use for compost.

What can I compost?

Anything that was once alive can be composted. Yard waste, such as fallen leaves, grass cuttings, weeds and the remains of garden plants, make excellent compost. Care must however be taken when composting kitchen scraps. Meat, bones and fatty foods such as cheese and salad dressings containing oils should be put in the garbage. All shells and peels can be composted.

Problems & Solutions

Symptom	Problem	Solution
The compost has a bad odor	Not enough air	Turn it. Add coarser materials
The centre of the pile is dry	Not enough water	Moisten materials while turning the pile
The compost is damp & warm in the middle, but no where else	Too small	Collect more material & mix the old ingredients into a new pile
The heap is damp & sweet-smelling but still will not heat up	Lack of nitrogen	Mix in a nitrogen source like fresh grass clippings, fresh manure, or ammonium sulfate
